FAMILY QUICK GUIDE / OCTOBER 2026

Reebok House Manager

A shared record for stays, house upkeep, member fees and family decisions. It supports the house team; it does not replace approval, payment checks or personal contact.

The key rule: a request holds its dates, but only an admin's approval confirms the stay.

01 WHO CAN DO WHAT?

Guests: their own bookings, stay feedback and the Useful Info notice board.

Members: shared booking summaries, own fee status, maintenance reports and eligible polls.

Shareholders: member access plus full read-only finances and exports. Shareholding is not admin authority.

Appointed admins: approvals, accounts, finances and house operations. Only a super-admin manages super-admin accounts.

02 HOW BOOKINGS WORK

Choose dates, guests and pets. Select check-in, then a later check-out. Keep the reference after submitting.

Pending and approved both block accommodation. A whole-house stay blocks every room; separate room stays can overlap only in different rooms. Checkout day can be the next check-in day.

Current form limit: the website submits public-rate, whole-house requests, even from the member console. Room/member-rate arrangements need admin assistance; backend support is not a complete member booking form.

Edits need review again. Saving changes returns the booking to Pending. Rejection releases dates; admins retain the history and reasons.

Pets: declare the number and read the notice. Default: pet-friendly property, but not furniture or bedrooms.

03 WHAT THE APP HELPS WITH

House operations: booking approvals/comments, expandable history, member invitations and registration review.

Money records: member fees, recorded payments, expenses and CSV/XLSX ledger tools. Admins still reconcile against actual bank records.

Upkeep: asset/warranty records and maintenance tasks, with approval, completion and supporting documents.

Decisions: members propose; admins review and poll admins only or members plus admins. Yes/No/Abstain counts and participation are visible to the eligible audience.

Communication: guest feedback moderation, Useful Info and editable booking email templates. This release also adds an admin-only User Guide and private App Feedback discussions.

04 LIMITS TO KEEP IN MIND

Setup-dependent: booking emails need working email configuration. Fee reminders also need a scheduled job. A saved booking is not proof an email arrived.

Telegram: linked members/admins can check availability when the bot is configured. No bot booking, WhatsApp or AI conversation; no working automatic Airbnb/Booking.com sync.

Not a full accounting or governance system: no verified online checkout, automatic bank reconciliation or formal quorum/outcome rules.

Uploads are not private storage. Anyone with a file URL can read it. Avoid sensitive documents; keep passwords and private booking links out of shared discussions.

05 QUICK ANSWERS

Why are unapproved dates blocked?
Pending requests hold dates until an admin approves or rejects them; there is no automatic expiry.

How do I find or change my booking?
Use your signed-in booking list or request a private email link with the reference and matching email. A reference alone is not access.

How do I cancel or report a problem?
Ask an admin to withdraw/reject a booking; there is no self-service cancel button. Use Maintenance for house faults, not software feedback.

What if I have no email or access?
Check spam and contact an admin using verified Useful Info. Do not make a duplicate booking. Admins use App Feedback for software suggestions.
